Class: MCA 2A

Academic Session: 2023-24

# Laboratory Manual

PHP with Laravel(MCA293)

### **Table of Contents**

| Assignment No. | Name of the Programs   | Page |
|----------------|--|------|
| 1              | Create a php webpage and print "Hello World" message.                              | 4    |
|                | Design HTML form and retrieve the values in PHP script.                            |      |
|                | Write a program to enter TWO numbers and print the Swap Numbers using PHP.         |      |
|                | Create a php program to find odd or even number from given number.                 |      |
| 2              | 1. Write a php program to find maximum of three numbers.                           | 7    |
|                | Write a PHP program to compute give number multiplication table.                   |      |
|                | Write a program to create Chess board in PHP using for loop                        |      |
| 3              | 1. Write a program to calculate Electricity bill in PHP                            | 10   |
|                | Conditions:  |      |
|                | For first 50 units – Rs. 3.50/unit   |      |
|                | For next 100 units – Rs. 4.00/unit   |      |
|                | For next 100 units – Rs. 5.20/unit   |      |
|                | For units above 250 – Rs. 6.50/unit  |      |
|                | You can use conditional statements.  |      |
|                | 2. To write a program for mathematical calculator.                                 |      |
| 4              | 1. Write a PHP program to create a String and store value on that string "php      | 13   |
|                | Program - the complete SOLUTION for WEB development". Do the following             |      |
|                | operations.  |      |
|                | convert lowercase string to uppercase  |      |
|                | convert uppercase string to lowercase  |      |
|                | convert first character uppercase  |      |
|                | convert first character of all the words uppercase                                 |      |
|                | get the last 11 characters of string   |      |
|                | -  |      |
|                | replace the first 'the' of the following string with 'best'                        |      |
|                | get the Second word of a sentence  |      |
|                | insert a string at the specified position in a given string                        |      |
|                | 2. Write a PHP script for the following: Design a form to accept a string. Write a |      |
|                | function to count the total number of vowels (a,e,i,o,u) from the string. Show the |      |
|                | occurrences of each vowel from the string.   |      |
| 5              | 1. Write a php program to check whether given number is String palindrome or not.  | 18   |
|                | 2. Write PHP program to display current date and display using getdate() function. |      |
|                | 3. PHP Program to display digital clock with current time of the Server.           |      |
|                | 4. Write a PHP program to Get Server Information.                                  | 4.0  |
| 6              | 1. Write a PHP program to create an array and store 10 names in the array. Do      | 19   |
|                | the following operations.  |      |

Class: MCA 2A

Academic Session: 2023-24

| 13 | 1. Write basic To-do task application project with home page, about page, task page with Laravel frame work (Using Controllers, Views, Middleware).  | 35 |
|----|--|----|
| 14 | 1.Write basic To-do task application project with home page, about page, task page with Laravel frame work (Using Controllers, Views, Middleware, Eloquent) with CURD operation with login system using. | 36 |

### Assignment No 1 - 14

### 1. Aim/Purpose of the Assignments:

**Assignment 1:** Aim of this assignment is to demonstrate basic Web development concepts with server side script using PHP, know basic PHP Syntax (includes defining variable, constant, data type and basic arithmetic Operations with operators). They provide a simple way to practice these concepts and understand how to perform common calculations using PHP programming.

**Assignment 2:** Aim of this assignment is to provide simple practice in PHP programming and showcase the use of user input from HTML interactive element like textbox and button, variable manipulation, and output.

**Assignment 3:** Aim of this assignment is to provide simple practice in PHP programming and showcase the use of user input from HTML interactive element like textbox and button, variable manipulation, and output. They also help in reinforcing concepts related to arithmetic operations, loops, and conditional statements in PHP.

**Assignment 4:** Aim of this assignment is to focus on String manipulation which are fundamental concepts in PHP programming. They provide valuable practice for handling string and solving problems related to String.

**Assignment 5:** Aim of this assignment is to focus on built in function concepts in PHP programming. They provide valuable practice for handling string and solving problems related to build in function.

**Assignment 6:** Aim of this assignment is to illustrate array in PHP and provide valuable practice for handling array in PHP.

**Assignment 7:** Aim of this assignment is to focus array and array related function in PHP and provide valuable practice for handling array in PHP.

**Assignment 8:** Aim of this assignment is to give a deeper understanding of Capturing Form and to handle Data Dealing with Multi-value field, Match, Search and Split function using PHP. They also help in reinforcing concepts related to POST, GET form method.

**Assignment 9:** Aim of this assignment is to give a deeper understanding of Capturing Form and to handle Data Dealing with file upload using PHP. They also help in reinforcing concepts related to POST, GET form method.

**Assignment 10:** Aim of this assignment is to illustrate the concept of file handling in PHP. Provide valuable practice for handling file in PHP.

**Assignment 11:** Aim of this assignment is to help programmers understand the basic knowledge of database with MYSQL and insert, view, delete, update operation with help of PHP scripting.

**Assignment 12:** Aim of this assignment is to help programmers understand the basics of Laravel framework and working with some valuable command in Laravel framework.

Name of the Faculty: Gopal Paul

Designation and Department: Assistant Professor (Computational Sciences)

Brainware University, Kolkata

Course Name (Course Code): PHP with Laravel(MCA293)

Class: MCA 2A

Academic Session: 2023-24

**Assignment 13:** Aim of this assignment is to help programmers learn how to create views, route, middleware in Laravel and security concerns in environment variable and in the context of web development.

**Assignment 14:** Aim of this assignment is to help programmers learn Eloquent in Laravel and know the session and cookies in the context of web development using PHP.

#### **Learning Outcomes**

- 1. Recall basic of PHP script and understand the framework and its installation.
- 2. Design appropriate user interfaces with validation and plan to implement web page based on given problem statement.
- 3. Consider a database and develop Laravel application using database CRUD operations.
- 4. Apply appropriate authentication by effectively using encryption/ decryption and focus importance of template inheritance implementations.
- 5. Prepare and develop dynamic web page using Laravel with database connectivity.

#### 2. Prerequisites:

Basic knowledge of programming and web designing are required

### 3. Software required:

xamp/VS code/Composer

### 4. Introduction and Theory

**Assignment 1**: Aim of this assignment is to demonstrate basic Web development concepts with server side script using PHP, know basic PHP Syntax (includes defining variable, constant, data type and basic arithmetic Operations with operators). They provide a simple way to practice these concepts and understand how to perform common calculations using PHP programming.

1. Create a php webpage and print "Hello World" message.

#### 2. Design HTML form and retrieve the values in PHP script.

| Enter your Name:     |  |
|----------------------|--|
| Enter Your Phone No. |  |
| Submit               |  |

**Assignment 3:** Aim of this assignment is to provide simple practice in PHP programming and showcase the use of user input from HTML interactive element like textbox and button, variable manipulation, and output. They also help in reinforcing concepts related to arithmetic operations, loops, and conditional statements in PHP.

# 1. Write a program to calculate Electricity bill in PHP Conditions:

- For first 50 units Rs. 3.50/unit
- For next 100 units Rs. 4.00/unit
- For next 100 units Rs. 5.20/unit
- For units above 250 Rs. 6.50/unit

You can use conditional statements.

**Assignment 4:** Aim of this assignment is to focus on String manipulation which are fundamental concepts in PHP programming. They provide valuable practice for handling string and solving problems related to String.

- 1. Write a PHP program to create a String and store value on that string "php Program the complete SOLUTION for WEB development". Do the following operations.
  - convert lowercase string to uppercase
  - convert uppercase string to lowercase
  - convert first character uppercase
  - convert first character of all the words uppercase
  - get the last 11 characters of string
  - replace the first 'the' of the following string with 'best'
  - get the Second word of a sentence
  - insert a string at the specified position in a given string

Academic Session: 2023-24

Class: MCA 2A

```
Php -String Opeartion
            String operation:
            OLowercase to uppercase
            OUppercase to lowercase
            OFirst character Uppercase
            OFirst character of all the words uppercase
                               characters of string
            OGet the last
            OReplace the first find Word
                                                 following string with replace word
            OSecond word of a sentence
            Olnsert a string
                                       Position of String:
            Value:

     document.getElementById('lposition').disabled = true;
```

Brainware University, Kolkata

Class: MCA 2A

Academic Session: 2023-24

```
document.getElementById('foundelement').disabled = true;
document.getElementById('replaceelement').disabled = true;
document.getElementById('element').disabled = true;
document.getElementById('postion').disabled = true;
}
</script></script>
```

2. Write a PHP script for the following: Design a form to accept a string. Write a function to count the total number of vowels (a,e,i,o,u) from the string. Show the occurrences of each vowel from the string

```
Enter Word:
                               Submit
                             a - position is 1
                             a - position is 3
                             madam - have No. of Vowels are 2
<!DOCTYPE html>

Class: MCA 2A

Academic Session: 2023-24

```
    return $num;

}
    if($_POST){
        $word=$_POST["word"];
        $inputword=strtolower($word);;
        if($word!=null){
            echo "$word - have No. of Vowels are ".countVowels($inputword);
        }
    }
    ?>
        </div>
    </div>
    </div>
    </body>
    </html>
```

**Assignment 5:** Aim of this assignment is to focus on built in function concepts in PHP programming. They provide valuable practice for handling string and solving problems related to build in function.

1. Write a php program to check whether given number is String palindrome or not.

```
<?php
function isPalindrome($number) {
    // Convert the number to a string
    $numberStr = strval($number);

    // Reverse the string
    $reverseStr = strrev($numberStr);

    // Check if the original and reversed strings are the same return $numberStr === $reverseStr;
}

// Example usage
$givenNumber = 12321;

if (isPalindrome($givenNumber)) {
    echo $givenNumber . " is a palindrome.";
} else {
    echo $givenNumber . " is not a palindrome.";
}</pre>
```

2. Write PHP program to display current date and display using getdate() function.

```
<!DOCTYPE html>
<html lang="en">
<head>
<meta charset="UTF-8">
```

Name of the Faculty: Gopal Paul

Class: MCA 2A

Academic Session: 2023-24

```
<meta http-equiv="X-UA-Compatible" content="IE=edge">
  <meta name="viewport" content="width=device-width, initial-scale=1.0">
  <title>Document</title>
</head>
  <body>
  <?php
$date_array=getdate();
foreach($date_array as $key=>$val){
    echo $key."=".$val."</br>";
}
echo "<h1>Today's date:".$date_array['mon']."/".$date_array['mday']."/".$date_array['year']."</h1>";
?>
  </body>
  </html>
```

3. PHP Program to display digital clock with current time of the Server.

4. Write a PHP program to Get Server Information.

```
<!DOCTYPE html>
<html lang="en">
<head>
  <meta charset="UTF-8">
  <meta http-equiv="X-UA-Compatible" content="IE=edge">
  <meta name="viewport" content="width=device-width, initial-scale=1.0">
  <title>Document</title>
</head>
< body >
<?php
echo"";
print_r($_SERVER);
echo"";
?>
</body>
</html>
```

**Assignment 6:** Aim of this assignment is to illustrate array in PHP and provide valuable practice for handling array in PHP.

- 1. Write a PHP program to create an array and store 10 names in the array. Do the following operations.
  - Display the contents using for each statement.
  - Display the array in a sorted order.
  - Display the array without the duplicate elements
  - Remove the last element and display
  - Display the array in reverse order
  - Insert a new element in a specified position
  - Search and find out position of an element from array

         print_r(array_keys($array, $search));
       ?>
    </div>
  </div>
</body>
```

**Assignment 8:** Aim of this assignment is to give a deeper understanding of Capturing Form and to handle Data Dealing with Multi-value field, Match, Search and Split function using PHP. They also help in reinforcing concepts related to POST, GET form method.

- 1. To create a self-processing form, use the \$\_SERVER['REQUEST\_METHOD'] that returns the request method e.g., GET or POST.
  - If the \$\_SERVER['REQUEST\_METHOD'] is GET, you show the form.
  - And if the \$\_SERVER['REQUEST\_METHOD'] is POST, you process it.

**Assignment 10:** Aim of this assignment is to illustrate the concept of file handling in PHP. Provide valuable practice for handling file in PHP

## 1. Write a program in PHP to get current directory, filename and code line number

#### 2. Write a program in PHP to read from directory.

```
<!DOCTYPE html>
<html lang="en">
<head>
  <meta charset="UTF-8">
  <meta http-equiv="X-UA-Compatible" content="IE=edge">
  <meta name="viewport" content="width=device-width, initial-scale=1.0">
  <title>Document</title>
</head>
< body >
<?php
current_dir = DIR_j;
dir = opendir(current_dir);
echo "Upload directory is $current_dir";
echo 'Directory Listing:';
echo '';
while(\$file = readdir(\$dir))
echo "".$file."";
```

    </div>
  </div>
</body>
```

**Assignment 11:** Aim of this assignment is to help programmers understand the basic knowledge of database with MYSQL and insert, view, delete, update operation with help of PHP scripting.

1. Create following table on MySQL. Create a to-do list application using this table with PHP scripting.

| # | Name     | Туре         | Null | Default | Comments | Extra          |
|---|----------|--------------|------|---------|----------|----------------|
| 1 | id       | int(11)      | No   | None    |          | AUTO_INCREMENT |
| 2 | task_des | text         | No   | None    | Task     |                |
| 3 | task     | text         | No   | None    |          |                |
| 4 | status   | varchar(200) | No   | None    |          |                |

Name of the Faculty: Gopal Paul

Designation and Department: Assistant Professor (Computational Sciences)

</html>

Class: MCA 2A

Academic Session: 2023-24

| 1. Insert new task |
|--------------------|
| 2. View all task   |
| 3. Delete task     |
| 4. Modify task     |

```
First, create the MySQL table. You can execute the following SQL query in your MySQL database:
      CREATE TABLE todo list (
        id INT AUTO_INCREMENT PRIMARY KEY,
        task name VARCHAR(255) NOT NULL,
        task_description TEXT,
        due_date DATE,
        status ENUM('Pending', 'Completed') DEFAULT 'Pending'
PHP Code
      <?php
      $servername = "your_server_name";
      $username = "your username";
      $password = "your_password";
      $dbname = "your_database_name";
      // Create connection
      $conn = new mysqli($servername, $username, $password, $dbname);
      // Check connection
      if ($conn->connect_error) {
        die("Connection failed: ". $conn->connect_error);
      // Add Task
      if ($_SERVER["REQUEST_METHOD"] == "POST" && isset($_POST["addTask"])) {
         taskName = POST["taskName"];
         $taskDescription = $_POST["taskDescription"];
        dueDate = POST["dueDate"];
         $sql = "INSERT INTO todo_list (task_name, task_description, due_date) VALUES ('$taskName',
       '$taskDescription', '$dueDate')";
        if(\$conn->query(\$sql) === TRUE) \{
           echo "Task added successfully!";
           echo "Error: ". $sql. "<br>". $conn->error;
      // Fetch Tasks
```

Name of the Faculty: Gopal Paul

Class: MCA 2A

Academic Session: 2023-24

```
\$sql = "SELECT * FROM todo list";
$result = $conn->query($sql);
?>
<!DOCTYPE html>
<html lang="en">
<head>
  <meta charset="UTF-8">
  <meta name="viewport" content="width=device-width, initial-scale=1.0">
  <title>To-Do List</title>
</head>
<body>
<h2>To-Do List</h2>
<!-- Add Task Form -->
<form method="post" action="">
  <label for="taskName">Task Name:</label>
  <input type="text" name="taskName" required><br>
  <label for="taskDescription">Task Description:</label>
  <textarea name="taskDescription"></textarea><br>
  <label for="dueDate">Due Date:</label>
  <input type="date" name="dueDate"><br>
  <input type="submit" name="addTask" value="Add Task">
</form>
<!-- Display Tasks -->
<h3>Tasks:</h3>
<tr>
    <th>ID</th>
    Task Name
    Task Description
    Due Date
    Status
  <?php
  if (\$result->num\_rows > 0) \{
    while (\$row = \$result - > fetch\_assoc()) 
      echo "<tr>";
      echo "" . $row["id"] . "";
      echo "" . $row["task_name"] . "";
      echo "" . $row["task_description"] . "";
      echo "" . $row["due_date"] . "";
      echo "" . $row["status"] . "";
```

Name of the Faculty: Gopal Paul

Class: MCA 2A

Academic Session: 2023-24

```
echo "";
} else {
   echo "No tasks found.";
}
?>

</body>
</html>
</php
// Close connection
$conn->close();
?>
```

**Assignment 12:** Aim of this assignment is to help programmers understand the basics of Laravel framework and working with some valuable command in Laravel framework.

#### Installation:

To install Laravel, you need to have Composer installed. Run the following command to create a new Laravel project:

composer create-project --prefer-dist laravel/laravel your\_project\_name

#### Artisan:

Laravel's command-line tool is called Artisan. It provides a number of helpful commands for common tasks. You can see a list of available Artisan commands by running:

#### php artisan list

#### Serve:

You can use Artisan to quickly start a development server:

### php artisan serve

#### **Routes:**

Laravel uses routes to determine which controller and method to call based on the HTTP request. Routes are defined in the routes/web.php file. Here's an example route:

#### Route::get('/hello', 'HelloController@index');

Write basic blog application project with home page, about page, blog page with Laravel frame work (View, Route).

Step 1: Create a New Laravel Project

Step 2: Create Routes

Step 3: Create Controllers

Step 4: Create Views

Step 5: Test Your Application

**Assignment 13:** Aim of this assignment is to help programmers learn how to create views, route, middleware in Laravel and security concerns in environment variable and in the context of web development.

Write basic To-do task application project with home page, about page, task page with Laravel frame work (Using Controllers, Views, Middleware).

Step 1: Configure Environment Variables

Step 2: Update Database Configuration

Step 3: Secure Your .env File

Step 4: Create Middleware for API Key Verification

Step 5: Apply Middleware to Task Route

Name of the Faculty: Gopal Paul

Course Name (Course Code): PHP with Laravel(MCA293)

Class: MCA 2A

Academic Session: 2023-24

Step 6: Use Environment Variables in the Task Controller

Step 7: Display API Key in the Task View

Step 8: Test Your Application

**Assignment 14:** Aim of this assignment is to help programmers learn Eloquent in Laravel and know the session and cookies in the context of web development using PHP.

### **Step 1: Set Up Database and Eloquent Model**

- 1. **Database Configuration:** Ensure that your **.env** file has the correct database configuration, as mentioned in the previous responses.
- 2. **Create a Model:** Generate a model for the **Task** entity:
- 3. **Define Eloquent Model:** Edit app/Models/Task.php to define the Task Eloquent model:

Step 2: Update Task Controller

Step 3: Update Task Views

**Step 4: Sessions and Cookies** 

**Step 5: Test Your Application** 

### 5. Operating Procedure:

Standard operating procedure for using XAMP as per the instruction of the faculty member

### 6. Precautions and/or Troubleshooting

Debugging while running the program

#### 7. Observations

Take different possible inputs and observe the output

#### 8. Calculations & Analysis

Assignment 1-14: Compile and Run time execution.

#### 9. Result & Interpretation

The result or output have to be shown in computer and write it in the assignment copy

#### 10. Follow-up Questions

#### **Assignment 1:**

- Describe about PHP, it's features, advantages and disadvantages.
- Describe difference between static and dynamic websites.
- Describe about server and local host server.
- Define about different data types in PHP.
- State the characteristics of PHP

## **Assignment 2:**

- Describe the declaration process of a variable in PHP with php code.
- Describe declaration process a constant in PHP.
- Discuss about operator and types.

### **Assignment 3:**

- Explain about Conditional or Decision making statement and its types.
- Discuss about loop and its types.

### **Assignment 4:**

- Show the different types of strings and math function in PHP.
- Express about array and Super global array

### **Assignment 5:**

Name of the Faculty: Gopal Paul

Designation and Department: Assistant Professor (Computational Sciences)

Brainware University, Kolkata

Course Name (Course Code): PHP with Laravel(MCA293)

Class: MCA 2A

Academic Session: 2023-24

• What are PHP Magic Methods/Functions?

### **Assignment 6:**

- What are the different types of Array in PHP?
- Explain the differences between indexed and associative arrays.

#### **Assignment 7:**

- What is difference between array\_merge and array\_combine?
- What is difference between count or size of function in php?
- How to check a key exist in an array?

### **Assignment 8:**

- Discuss at least 5 types of form elements and fields.
- Discuss GET, POST method in PHP

#### **Assignment 9:**

• How does PHP handle form submissions?

#### **Assignment 10:**

- Develop the Process for file and directory handling in PHP.
- Illustrate at least five function names of file with their description.
- Illustrate Construct the steps for Uploading files.

#### **Assignment 11:**

- Illustrate few lines about Database with some feature
- Explain the steps or process to retrieve data from database in PHP
- Explain the steps or process to update data from database in PHP
- Explain a PHP program to insert record into a table using MySQL.
- Explain the process to create a table in MySQL
- Explain different types of function in Database

#### **Assignment 12:**

- What is Laravel, and what are its key features?
- What is Composer in PHP?
- Explain the purpose of the **composer.json** file.
- How do you define routes in Laravel?
- Explain the difference between GET and POST routes in Laravel.

#### **Assignment 13:**

- Explain the purpose of the composer create-project command in Laravel.
- How does Laravel handle database migrations?
- What is Blade in Laravel?
- How do you include a sub-view in Blade?

#### **Assignment 14:**

- What is Cross-Site Request Forgery (CSRF), and how do you prevent it in PHP?
- What is Eloquent in Laravel?
- Explain the concept of model relationships in Eloquent.
- How do you use Eloquent to retrieve records from a database?

#### 11. Extension and Follow-up Activities (if applicable)

Not applicable

#### 12. Assessments

Name of the Faculty: Gopal Paul

Designation and Department: Assistant Professor (Computational Sciences)

Brainware University, Kolkata

Course Name (Course Code): PHP with Laravel(MCA293)

Class: MCA 2A

Academic Session: 2023-24

As per the assessment and evaluation policy of University

### 13. Suggested readings

- 1. Learning PHP, MySQL & JavaScript, Robin Nixon, O"Riley Press, 4th Edition, 2014.
- 2. Programming PHP: Creating Dynamic Web Pages, Kevin Tatroe, Peter MacIntyre, Rasmus Lerdorf, O" Riley Press, 3rd Edition, 2012.
- 3. https://laravel.com/

### 14. Assignment copy format:

- 1. Write in A4 page; No channel file will be accepted.
- 2. Front page and Index page format will be provided by department
- 3. Following points must be included while writing assignment copy
  - a) Problem definition
  - b) Algorithm
  - c) Program in corresponding language
  - d) Output
